National Native Network to present at National Indian Health Board Annual Conference

SAULT STE. MARIE, Mich. – Joshua Hudson, Program Manager, National Native Network at Inter-Tribal Council of Michigan; Richard Mousseau, MS(c), National Native Network Board Director and Program Manager at Great Plains Tribal Chairmen’s Health Board; and Paul Allis, M.Ed., Policy Analyst at FDA’s Center for Tobacco Products (CTP) will be presenting at the National Indian Health Board (NIHB) 2017 National Tribal Public Health Summit. The Summit will be taking place June 6-8, 2017 at the Dena’ina Center in Anchorage, Alaska.

The National Native Network’s presentation is titled “Utilizing Resources, Infrastructure, and Capacity to Implement Comprehensive Commercial Tobacco Policies.” The learning objectives of the presentation are to: (1) share expertise and practices being utilized
in the Great Plains; (2) identify available resources of the FDA Center for Tobacco Products to educate and engage a wide array of stakeholders on Tribal Lands; and (3) share among an existing tobacco control and prevention network throughout Indian Country.

This roundtable discussion will identify that commercial tobacco use is a major concern in AI/AN communities that needs to be placed as a high public health priority. The National Native Network addresses these concerns by developing a forum for AI/AN organizations to obtain and disseminate evidence-based and culturally appropriate information that work toward the identification and elimination of health disparities related to commercial tobacco. Policy gaps exist in coverage and enforcement of commercial tobacco use and secondhand smoke (SHS) in tribal communities. Tribal communities need tobacco policy assessments to create policy tool kits and roadmaps like White Earth Nation and South Dakota to educate tribes on policies that exist. The FDA Tribal Liaison will provide an overview of the technical assistance and web-based resources available for the purpose of educating Tribal leaders and their tribal enterprises.

The National Native Network will also be represented with a vendor booth at the event. The vendor booth will provide the opportunity for one-on-one discussion about traditional tobacco versus commercial tobacco featuring traditional tobacco ties offered as gifts to booth guests. There will also be infographics available, logo items, and polo shirt drawings.

The theme for this year’s Summit is “Together We Rise: Sustaining Tribal Public Health as a National Priority.”

This year’s Summit conference tracks are: health promotion and disease prevention; public health policy, infrastructure capacity; substance misuse and behavioral health; climate change and environmental health; empowering youth wellness.
The NIHB represents Tribal governments - both those that operate their own health care delivery systems through contracting and compacting, and those receiving health care directly from the Indian Health Service (IHS).

Located in Washington, D.C. on Capitol Hill, the NIHB, a non-profit organization, provides a variety of services to tribes, area health boards, tribal organizations, federal agencies, and private foundations, including: advocacy; policy formation and analysis; legislative and regulatory tracking; direct and timely communication with tribes; research on Indian health issues; program development and assessment; training and technical assistance programs; project management.

SAULT STE. MARIE, Mich. – The Inter-Tribal Council of Michigan’s National Native Network present a webinar series: Cancer Risk Reduction in Indian Country.

Presented by: Cathy Edgerly, REACH Program Manager, Inter-Tribal Council of Michigan
Title: Tribal BRFS Toolkit Presentation
Date: Tuesday, May 23, 2017
Time: 3 - 4 PM, EST

Learning Objectives:
1. Describe the reason(s) why a tribal healthcare system might need to conduct a tribal specific BRFS by May 30, 2017.
2. Identify potential partners to assist with a tribal specific BRFS by May 30, 2017.
3. Reference the AI/AN BRFS Toolkit to meet the five phases of the BRFS time line by May 30, 2017.

Target Audience: Physicians, nurses, health educators, administrators, and support staff working with American Indian and/or Alaska Native communities.
Second Call for Abstracts

Greetings from Spirit of Eagles!

We got great responses to the first Call for Abstracts and reviews are underway. The first deadline was early, but it was required for us to start the process of making continuing education credits available for the conference. There are additional presentation opportunities available, so we have decided to issue a Second Call for Abstracts.

In addition, our partners at The National Native Network (NNN) (http://www.keepitsacred.org) have committed to sponsor special travel scholarships for selected presenters whose work focuses specifically on Policy, Systems, and Environmental (PSE) approaches for improving commercial tobacco and cancer programs and services for American Indians. The abstracts submitted in response to both the first and second Call for Abstracts will be eligible for the scholarship.

Abstracts in response to the Second Call are due Monday, May 15.

The Second Call for Abstracts form is attached below in both .doc and .pdf format.
Gone Too Soon

Tammi Meissner writes a letter promising to encourage folks to get screened.

ORIGINAL ARTICLE

Dear Aileen,

I can’t believe that it has been 13 years since you passed after a two and a half years fight against colorectal cancer. You were so strong and so positive through all the poking, prodding, and chemo treatments. I wish you had gotten checked earlier so that maybe your cancer wouldn’t have taken you from us.

I get emotional at every celebration and life event because I wish you were here. Darian graduated from high school and is now in college. She is going to become a nurse. I feel part of this decision is based on how we cared for you during those two and a half years. She is going to be great at whatever she does. She is also getting married this August to a wonderful young man that I know you would have loved too.

Kiara is a wonderful artist and a Junior in high school now. I can’t believe how time flies. She will graduate next year and plans on attending college to be an art teacher. She got her driver’s license last week. Wow! I thought she was going to take after you and decide to never drive. Kiara and Darian remind me of you in so many ways. They are kind, compassionate, and loving people. You would be so proud of your beautiful granddaughters.

When I married Greg, I was and am still so happy. I was so lucky to have, you, my mother-in-law, that was welcoming, accepting and taught me about unconditional love. As I write, I am wiping away the tears, my heart aches and I wish that we and the rest of the family had more time with you and that you were here to attend all of these life events and celebrate them with us.

Because of you, my promise is to continue to educate everyone I can about colorectal cancer. At the time you were diagnosed, doctors didn’t know that smoking was related to colorectal cancer, and I wish they did. You know me, I try to make things interesting, fun, and educational…so I am going to try to get people to “Love their butt, bum, keister,” whatever they want to call it and have them get it checked.

The memory of losing you is still very painful, you know that we love you and that we miss you every day. You know that I am stubborn, strong willed and determined and that I will share the information about the importance of getting screened for colorectal cancer. I do this in your memory, Aileen. You left us too soon and I don’t want anyone else to feel the pain of losing a loved one too early.

Love you always,

Tammi
NACR Native Patient Navigator Training

Native Patient Navigation Quarterly Trainings

June 14-16, 2017

Registration Deadline: May 14, 2017

17 hours (including 6 for Motivational Interviewing)
(certificates upon completion)

This training is offered by: Native American Cancer Research Corporation (NACR), 1-800-537-8295 or cell: 720-987-8944

All participants need to support their own travel and lodging expenses

The Registration fee is $550 per participant. There are a limited travel scholarships for each training. Please request the partial scholarship when submitting the registration form (bottom of this page)

Email registration forms to lindab@natamcancer.net or lisah@natamcancer.org

Mail payments Native American Cancer Research Corporation (NACR), 3022 South Nova Road, Pine, CO 80470-7830 by May 14th

The focus of the June quarterly Native Patient Navigator training is on communication and outreach

Wednesday, June 14, 8 a.m. to 5 p.m.; Day 1: Motivational Interviewing, advocating on behalf of the patient and assisting the patient in identifying concerns and questions to share with the health care team 6 hours of credit

Thursday, June 15, 8 a.m. to 5 p.m.; Day 2: Motivational Interviewing, handling conflict (patients, family members and other members of the healthcare team; outreach strategies, exhibits during events 7 hours of credit

Friday, June 16, 8 a.m. to 1 p.m.; Day 3: literacy, effective message components, creating effective informational products (brochures, pamphlets) 4 hours of credit

Where:

To be named

Denver, CO 80227

Patient navigation is a patient-centric healthcare service delivery model. It is a patient-centric concept that concentrates on the movement of patients along the continuum of medical care. This training focuses on motivational interviewing team work and collaboration, confidentiality and privacy and professionalism. Each topic area will include participant interactivities or practical exercises.

Email lisah@natamcancer.org with any questions.
May is National Skin Cancer Prevention and Detection Month

Longer days, warmer weather, don’t forget that sunscreen. Protect the skin you’re in!

Skin cancer is the most common form of cancer in the United States and the most preventable cause of skin cancer is over exposure to UV light (from the sun or artificial sources).

How to reduce your risk:

• Stay in the shade, especially during midday hours.
• Wear clothing that covers your arms and legs.
• Wear a hat.
• Wear sunglasses.
• Use sunscreen of at least SPF 15.
• Avoid indoor tanning.

Part Two of Linda Burhansstipanov NNN Podcast

This is the second half of a conversation with Linda Burhansstipanov where we talk about the fantastic work her organization, Native American Cancer Research Corporation, does with a focus on social determinants of health, cultural competency and patient navigation. Look for new podcasts soon!

WHAT YOU CAN DO

**Tobacco users**
- Call the quitline today (1-800-QUIT-NOW) for information, advice, support, and referrals to help you quit. The sooner you quit, the sooner your body can begin to heal, and the less likely you are to get sick from commercial tobacco use.
- Never smoke commercial tobacco in your home, vehicles, or around nonsmokers, especially children, pregnant women, and persons with heart disease or respiratory conditions.
- Ask a health provider or traditional healer for help quitting.

**Community members**
- Make your home and vehicles 100% smoke-free 24/7 from commercial tobacco smoke.
- Don’t start, if you aren’t already using commercial tobacco.
- Tell your community leaders you support commercial tobacco control programs and smoke-free policies in all indoor air environments.
- Teach children about the health risks of smoking commercial tobacco and secondhand smoke.
- Encourage friends, family, and coworkers to quit. Support them in their efforts.

**Health care providers**
- Ask your patients if they use commercial tobacco; if they do, help them quit.
- Advise all patients to make their homes and vehicles 100% smoke-free 24/7 from commercial tobacco smoke.
- Make quitting commercial tobacco part of an overall approach to health and wellness.
- Advise nonsmokers to avoid secondhand smoke exposure, especially if they are pregnant or have heart disease or respiratory conditions.
- Refer patients to recommended resources and support groups.

**Community leaders**
- Fund comprehensive commercial tobacco control programs.
- Designate all indoor air environments 100% smoke-free from commercial tobacco smoke.
- Increase the price of all commercial tobacco products.
- Implement hard-hitting media campaigns that raise public awareness of the danger from commercial tobacco use and secondhand smoke exposure.
- Reduce commercial tobacco use by making these products less accessible, affordable, and desirable.

Tobacco’s Impact On The Environment

Cigarettes and cigarette butts make up nearly 38% of all collected litter.

As many as 65% of cigarette butts are littered.

75% of smokers report disposing of cigarettes on the ground or out of a car.

In 2012, 1,465,315 pounds of toxic chemicals were released by tobacco product manufacturing facilities.

Tribal BRFSS Toolkit

Tribal Behavioral Risk Factor Surveillance System

BRFSS Toolkit Presentation

Presented by: Cathy Edgerly,
Inter-Tribal Council of Michigan

Tuesday, May 23, 2017,
3 p.m. EDT

NNN Webinar Series on Cancer Risk Reduction in Indian Country

REGISTER AND DETAILS HERE: http://keepitsacred.itcmi.org/2017/03/nnn-webinar-brfss-toolkit-presentation/
Cancer is the name for diseases that happen when cells—the normal small units that make up the human body—start to grow too fast in an unhealthy way. Normal cells get a signal from the body to stop growing, but cancer cells don’t get this signal. They keep growing, and may form a group of cells called a tumor. Sometimes, cancer cells break off from the tumor and spread to other parts of the body.

Is cancer serious?

Some cancers can cause serious illness and even death, while other cancers grow slowly and do not need treatment. Most cancers that are serious can be treated, and some can be cured. Cancer affects different people in different ways. If you have been told you have cancer, talk to your doctor about which treatment options are right for you.

Will I get cancer?

Cancer is the second leading cause of death among Native Americans and Alaska Natives. Anyone can get cancer, but some people have a higher risk. We can control some risks. For example, we know that smoking causes many kinds of cancer, and quitting smoking can lower your risk of getting these cancers. Other risks we can’t control, like getting older or having a family history of cancer.

Native Americans and Alaska Natives get most kinds of cancer at lower rates than white people. But rates of stomach, liver, cervix, kidney, and gallbladder cancers are higher among these groups.

How can I lower my risk?

Things You Can Do

- Be active and exercise, and keep a healthy body weight.
- Learn about hepatitis B and HPV shots, which can prevent cancer.
- Talk to your doctor about getting screened for breast, cervical, and colon cancers.
- Protect yourself from the sun when you’re outdoors.

Things You Can Avoid

- Don’t smoke, and avoid smoke from other people’s cigarettes.
- Don’t drink too much alcohol.

Admiring the Fighters

If you or a loved one has been diagnosed with cancer, knowing what to expect and making plans to proceed can help create a less stressful situation.

GET THE FACTS

What kind of cancer do I have?

What are my treatment options?

Can my cancer be treated?

Where is the cancer? Has it spread?

MAINTAIN A HEALTHY LIFESTYLE

Adequate Rest

Helps manage the stress and fatigue of the cancer and its treatment.

Exercise

Studies suggest that people who participate in some physical exercise during treatment not only cope better but may also live longer.

Healthy Diet

Nutrition is an important part of cancer treatment. Eating the right foods before, during, and after can help you feel better and to stay stronger.

Fatigue

One of the most common and distressing side effects of cancer treatments.

Hair loss is a common side effect from chemotherapy treatments.

Financial burdens may arise as result of diagnosis.

Additional costs of medicines, travel costs, etc.

A cancer diagnosis is a lifelong ordeal. Treatment recovery can last months, sometimes even years.

BE PREPARED FOR CHANGES

Cancer survivors face physical, emotional, psychosocial, spiritual and financial challenges as a result of their diagnosis and treatment.

DEVELOP YOUR OWN COPING STRATEGIES

Highs and lows of cancer are experienced not only by those diagnosed but also family members, friends, and caregivers.

FIND A SOURCE OF SPIRITUAL SUPPORT

KEEP A JOURNAL TO HELP ORGANIZE YOUR THOUGHTS

WHEN FACED WITH A DIFFICULT DECISION LIST PROS AND CONS

SACRED TRADITIONAL TOBACCO FOR HEALTHY NATIVE COMMUNITIES

A BALANCED COMMUNITY FOR HEALTH

- Tribal leadership support & engagement
- Cultural connectedness & healing
- Community engagement
- Youth leadership & youth-led advocacy

Enact tribal ordinance that disallows harmful tobacco use inside building and 25 feet outside building.
Encourage traditional tobacco for gifts and offerings at ceremonies and events.

Enact tribal tobacco policies that will improve community health.
Prioritize and support positive community health initiatives.

Provide direct support to quit with culturally specific cessation.

Grow traditional tobacco and provide education for community members.

Use signage to promote traditional American Indian cultural values around tobacco and solutions.

Eliminate sale of flavored tobacco and e-cigarette products.
Limit marketing of commercial tobacco and ensure youth do not have access.

Incorporate traditional tobacco knowledge and practices into education.

Do not allow cigarette smoking.

Engage community with knowledge of cultural practices for traditional tobacco use.

American Indian Cancer Foundation.
